About

I take AI from prototype to production: designing the data pipelines, retrieval layers, agent workflows, and observability that let it run reliably at scale. I care as much about evaluation, latency, and cost as I do about model quality, because that's what separates a promising demo from a system people depend on. My goal is simple: AI that delivers measurable business value and earns the trust of the teams who use it.

Top skills
LangGraph • Agentic AI Development • Python (Programming Language) • FastAPI • LangChain
